EXECUTIVE SUMMARY

FullStack Developer (MERN) with 3+ years of experience delivering scalable, accessible, and high-performance web applications. Skilled in **React.js**, **Redux**, and **Next.js** for building dynamic and responsive user interfaces. Experienced in developing RESTful APIs and handling backend integrations using **Node.js, Express.js** and **MongoDB**. Strong understanding of state management, server-side rendering (SSR), accessibility (ADA compliance), Google cloud basics (**Google Cloud ACE certified**) and Generative AI basics (**Google Generative AI certified**). Passionate about writing clean, maintainable code and continuously improving DSA and system design skills. Successfully contributed to enterprise projects for leading clients like Staples (TCS).

FUNCTIONAL EXPERTISE

- **ReactJS & Redux Frontend**
- **HTML/CSS Responsive UI**
- **MongoDB as Database**
- **Problem Solving and Debugging in JS**
- **Node.js, Express.js Backend**
- **Version Control & CI/CD Pipelines**

RELEVANT PROJECTS

1. Task Creator

A simple application to save our Tasks that are to be Completed. Used MERN Stack for developing this application. Explore my work with the link **https://task-creator-opal.vercel.app/ .** Create an account for yourself and save your tasks .

Github link to find the repository - **https://github.com/Pravin1095/Task_Creator**

Tech Stack Description :

Frontend (UI/UX):

- **React.js** – Built the user interface with reusable, modular components.
- **React Router** – Implemented client-side routing for Auth and Home pages.

- **Styled Components** – Used CSS-in-JS for responsive, theme-based styling and better maintainability by passing props through to the styled components.
- **Axios** – Managed API calls between frontend and backend with proper error handling and async operations.
- **React Context API** – Implemented global states so that we can have state access through all our components (login/logout/token/loaderState).
- **Vercel** – Deployed frontend with automatic CI/CD, enabling global access to the application.
- **Authentication** – Authenticating frontend through token sent from the backend and storing it in localStorage so that it won't be erased during refresh. Also setting a timer for 1 hour for auto logoff.
- **Form Validation -** Allowing users only to enter valid characters and not any special symbols so that no corrupted or malicious data or scripts are entered to the site.

Backend (API & Server):

- **Node.js with Express.js** – Developed RESTful APIs to handle user authentication and task management.
- **MongoDB with Mongoose** – Used as the database for storing users and tasks, with schema-based validation.
- **JWT (JSON Web Token)** – Implemented secure authentication & authorization flow.
- **Render** (if you deployed backend there, otherwise mention localhost for now) – Used for backend deployment and API hosting.

2. Personal Portfolio

A fully responsive frontend portfolio built using React & Redux.

https://pravin-portfolio-62j8.vercel.app/ . You can find the code in https://github.com/Pravin1095/Pravin-Portfolio

3. Tour Booking Website (Not Deployed, Work in Progress)

Building a full-stack travel site using React, Express, Node and MongoDB Atlas. Implemented secure routes, REST APIs, and cloud data storage. https://github.com/Pravin1095/Tour_Booking_MERN

Additional Professional Development :

- Acquired Associate Cloud Engineer Certification from Google Associate Cloud Engineer
- Acquired Generative AI Leader Certification from Google Generative AI Leader

Work Experience

Current Organization : Tata Consultancy Services
July 2022 - Current
I am working for the Client Staples, which is a US based retail company where I am expected to communicate with the client and understand their requirements and deliver their expectations in time. We have a team of developers, QA, and product owners and I have a good experience of collaborating as a team by participating in agile team meetings and contributing to project plan and execution . We have daily scrum calls where we update our daily work. Participated in code reviews to ensure we have a good quality of code.

Role : FullStack Developer

- Developed single-page applications using ReactJS and Redux with reusable, performant components.
- Implemented styled-components over SCSS for improved maintainability, reusability, and dynamic styling using props.
- Worked on responsive UI for all screen sizes ensuring consistent user experience.
- Ensured ADA compliance for better accessibility for disabled users.
- Used Redux for global state management to access states in every component and used axios for data fetching inside action handlers and dispatched the fetched data to reducers.
- Worked on migrating Class components to Functional Components
- Worked on Redesigning the UI of different pages.
- Used several React Hooks like useState, useRef, useEffect, useContext , useMemo, useCallback in the best way so that the webpages work with the best performance.
- Implemented Lazy Loading in the client side which reduced the bundle size from 20%-60% which increased our website performance
- Implemented HTTP routes (GET, POST, PUT, DELETE) using Node.js and Express for backend integration.

- Worked on server-side rendering (SSR) with Next.js to improve initial page load performance.
- Utilized Git for version control using common commands like clone, commit, pull, push and merge, and collaborated via Bitbucket repositories, and implemented CI/CD workflows with Jenkins for automated builds and deployments.
- Utilized JWT for Authentication. Generating tokens in backend and sending them to frontend and storing them in the Cookies and later passing them back to backend and using a middleware to check if token exist or not and only then allow access to the HTTP routes.

EDUCATION

B.Tech in Sastra Deemed To Be University, Thanjavur with a CGPA of 7.5/10
